

How to Keep all the Profits from Your Prepress/Premedia Technology Investments

Amgraf, Inc. is a different kind of prepress/premedia software company. We license our software tools per designer, and then allow you to use the software for an unlimited number of jobs and projects.

No filler-licenses or other incremental license fees are ever required to use or print electronic and Internet forms created with Amgraf's OneForm™ Designer Plus and OneForm Manager Lite. No per-product or per-printer license fees are ever required to produce documents using Amgraf's MECCA™ 2000 Integrated Electronic Publishing System.

In other words, you make more money because with our business model – THE MORE YOU PRODUCE, THE MORE YOU SAVE!

THE MORE YOU PRODUCE, THE MORE YOU SAVE!

Simply stated, all OneForm Designer Plus forms are generated as generic HTML and/or PDF pages. These pages can be opened by the standard web browsers and the free Adobe Reader. Our technology is ideal for electronic forms that must be accessed by the general public free-of-charge. There are no costly “proprietary” filler applications required to use any OneForm created designs. There is no need for end-users to license or download custom forms-filler software.

End-Users of forms and online ordering systems created with OneForm Designer Plus only require a standard web-browser and/or the free Adobe Reader. There are no additional per-user costs involved. You can freely deploy your forms and online ordering sites to as many users as you wish without the burden of requiring expensive individual licenses.

Deploy as many forms as you wish to an unlimited audience of end-users at no additional cost. With OneForm Designer Plus you can create HTML and/or PDF forms with fully functional fill, print, submit, recall, and email capabilities. Since all forms are generated as industry standard HTML and/or PDF pages, end-users can access the forms from a web browser with the free Adobe Reader. The forms can easily be connected to databases for data collection via a submit button. In addition, with Amgraf’s free OneForm Manager Lite utility software, you can provide offline HTML/PDF form filling sessions and allow end-users to locally manage all their input data as XML for storage, retrieval, email, and upload.

Form filling is free! With Amgraf’s OneForm Designer Plus Stationery Option, there are no click-charge royalties when a client uses your online ordering system. You can design, host, maintain, and own the entire online experience. How you develop and scale your revenue model is completely up to you, not Amgraf.

With our software you can freely deploy forms on as many web servers as you wish. We fully support all the popular server technologies for Windows and Unix systems, with database connectivity to Oracle, MS SQL Server, MySQL, and others. OneForm Designer Plus automatically creates Perl/CGI scripts language for forms data capture and online ordering workflows. Amgraf also has starter kits of open source software for building forms portals, ecommerce systems, and much more!

Amgraf’s OneForm Designer Plus Stationery Option is a complete authoring tool for creating online ordering pages to display personalized imprinted products like stationery, business cards, direct mail flyers, and postcards. Almost any personalized product can be visualized and imprinted using our software. Our business model lets you add new products and service new customers without ever paying royalties.

With Amgraf’s MECCA 2000 Integrated Electronic Publishing System, you can output paginated personalized images to all the digital printing presses in your shop, without paying Amgraf any additional fees per printer. We support imposition and high-speed variable imaging to the most popular printers from Xerox, HP Indigo, Oce, Xeikon, and others so that you can choose the output device to fit the job, and never be concerned with licensing separate printer drivers for each device.
